Quinnipiac University Poll

Doug Schwartz,
Associate Vice President and Director
(203) 582-5201

This RDD telephone survey was conducted from October 15 - 19, 2026 throughout the state of New York.

Responses are reported for 1,167 likely voters with a margin of sampling error of +/- 3.8 percentage points, including the design effect. Margins of sampling error for subgroups are available upon request.

Surveys are conducted in English or Spanish dependent on respondent preference, with live interviewers calling landlines and cell phones. Data collection support provided by Dynata. The Quinnipiac University Poll managed and tabulated all data.

PARTY IDENTIFICATION QUESTION WORDING - Generally speaking, do you consider yourself a Republican, a Democrat, an Independent, or what?

	LIKELY VOTERS
PARTY IDENTIFICATION	
Republican	22%
Democrat	40
Independent	30
Other/DK/NA	8

METHODOLOGICAL DETAILS

Dual frame landline and cell phone samples are generated using Random Digit Dialing procedures by Dynata. Both the landline and cellular phone samples are stratified by Census division according to area code. This survey includes 378 completes from the landline frame and 789 completes from the cellphone frame.

The probability-based survey requires respondent access to a phone and at least three call attempts are made to try to reach potential respondents. When calling landlines interviewers ask to speak with the adult member of the household having the next birthday. Interviews are conducted on cell phones with both cell only and dual owner respondents. The complete land and cell sample is weighted to National Health Interview Survey estimates for [land only/cell only/dual owner] households.

Using CATI, questions are asked as they appear in the release document. If a question is asked of a subset of the sample, a descriptive note is added in parentheses preceding the question. Questions are numbered as asked with additional questions found in successive releases.

This survey uses statistical weighting procedures to account for deviations in the survey sample from known population characteristics, which helps correct for differential survey participation and random variation in samples. The overall adult sample is weighted to recent Census data using a sample balancing procedure to match the demographic makeup of the population by county, gender, age, education and race; and also weighted to party identification benchmarks from recent Quinnipiac University polls and to 2024 presidential election results. For weighting purposes, some demographics were imputed. However, these imputed demographics are not included in the response tabulations.

Research limitations can come from many potential sources and there may be unmeasured factors in this or any other public opinion poll.

Polls are funded entirely by Quinnipiac University. The Quinnipiac University Poll is part of the Office of Marketing and Communications.
