**FOR RELEASE: DECEMBER 9, 2020**

**61% SAY THEY ARE WILLING TO GET A COVID-19 VACCINE,  
QUINNIPIAC UNIVERSITY NATIONAL POLL FINDS;  
74% SAY THEY OR SOMEONE THEY KNOW HAS BEEN INFECTED**

As health officials in the United States consider authorizing the use of COVID-19 vaccinations, 61 percent say they are willing to get vaccinated if a COVID-19 vaccine is approved, according to a Quinnipiac (KWIN-uh-pea-ack) University national poll released today. Thirty-three percent say they don't think they would be willing to get vaccinated.

Sixty-five percent say they are either very (20 percent) or somewhat (45 percent) confident in the federal government's ability to oversee the safety of the COVID-19 vaccines, while 33 percent say they are not so confident (17 percent) or not confident at all (16 percent).

As for how quickly people are willing to get a COVID-19 vaccine once it's approved, 37 percent say as soon as possible, 41 percent say they would wait a few months, and 20 percent say never.

"When it comes time to roll up the sleeve, will Americans put their trust in the vaccine? The answer is yes, but as far as timing, there will be no rush to be first in line," said Quinnipiac University Polling Analyst Tim Malloy.

Two-thirds, 67 percent, say they do not think their state should make it mandatory for people to get vaccinated if a COVID-19 vaccine is approved by government health officials, while 29 percent say they do think getting a COVID-19 vaccination should be mandatory.

**COVID-19: PERSONAL EXPERIENCE**

Nearly three-quarters, 74 percent, say they either have been infected themselves or personally know someone who's been infected by the coronavirus. That's a jump of 45 percentage points from April when the question was first asked. Currently, 26 percent say they have not been infected themselves or do not personally know someone who has been infected.

Seventy-seven percent say they are either very concerned (46 percent) or somewhat concerned (31 percent) that they or someone they know will be infected with the coronavirus, while 23 percent say they are either not so concerned (13 percent) or not concerned at all (10 percent).

“It’s gotten personal and painful. Some nine months into a national trauma, Americans see the COVID-19 crisis deepening. Those emotions are driven by familiarity and relationships with victims either sickened by or lost to the coronavirus,” said Malloy.

Sixty-four percent say they are either very concerned (34 percent) or somewhat concerned (30 percent) about their local hospitals running out of space to care for sick patients, while 35 percent say they are either not so concerned (18 percent) or not concerned at all (17 percent).

“If the worst case befalls your household, will you be able to rely on treatment in your hometown? The answer underscores the pervasive fear that you may be on your own,” added Malloy.

Fifty-seven percent say they think the coronavirus situation in the U.S. is getting worse, 12 percent say it’s getting better, and 28 percent say it’s about the same.

As to when people expect the coronavirus crisis to be over in the U.S., 51 percent say they think it will take more than a year, 41 percent say a few months, and 2 percent say a few weeks.

### **COVID-19: GUIDELINES & THE HOLIDAYS**

A plurality (48 percent) say they think the federal government’s travel guidelines addressing the coronavirus pandemic are about right, 31 percent say they don’t go far enough, and 14 percent say they go too far.

When it comes to plans for the holiday season, a majority (58 percent) say they do not expect to visit with family and friends outside their households, while 40 percent say they do expect to.

In contrast, 62 percent say they expect people they know to visit with family and friends outside their households this holiday season, while 36 percent say they do not expect that.

Asked about tightening COVID-19 restrictions in their community:

- 60 percent say they support tightening restrictions on bars, and 37 percent oppose;
- 54 percent say they support tightening restrictions on gyms, and 40 percent oppose;
- 53 percent support restrictions on dining indoors at restaurants, and 44 percent oppose.

### **MASKS**

When asked how often they wear a mask in public where six feet of social distancing can’t always be maintained, 74 percent say all the time, 13 percent say most of the time, 5 percent say sometimes, 3 percent say hardly ever, and another 3 percent say never.

However, when asked about people in their community wearing masks, the numbers are very different. Only 21 percent say people in their community wear a mask all the time when they are in public when six feet of social distancing can’t always be maintained, 52 percent say most of the time, 19 percent say sometimes, 7 percent say hardly ever, and 1 percent say never.

978 self-identified registered voters nationwide were surveyed from December 1st – 7th with a margin of error of +/- 3.1 percentage points.

The Quinnipiac University Poll, directed by Douglas Schwartz, Ph.D., conducts gold standard surveys using random digit dialing with live interviewers calling landlines and cell phones. The Quinnipiac University Poll conducts nationwide surveys and polls in more than twenty states on national and statewide elections, as well as public policy issues.

38. If a COVID-19 vaccine is approved by government health officials, which comes closest to your point of view: you would take the COVID-19 vaccine as soon as it's available to you; you would wait a few months to take the COVID-19 vaccine after it is available; or you would never take the COVID-19 vaccine?
